## Use in Food and Food Supplements

MEGGLE Product:

Co-processed Excipient: StarLac®

The MEGGLE Product is a spray dried mixture of 85 parts lactose monohydrate and 15 parts starch (maize / corn) and is manufactured and typically used as excipient in pharmaceutical industry.

The MEGGLE Product can be used as compound ingredient in the production of food including infant formulae and for food supplement products. The use of the product for which food and food supplements regulations are applicable underlies the responsibility of the customer.

**Lactose monohydrate** is the natural occurring sugar of milk ("milk sugar"). It is gained from whey via crystallization, washing and refining. It is regarded as dairy product or as sugar. Lactose monohydrate is not regarded as food additive. Therefore, JECFA and other food additive standards does not exist.

Lactose monohydrate is regarding the main chemical-physical characteristics (besides pH value as indicated) in compliance with

- Codex Alimentarius Standard 212-1999<sup>1</sup>
- US Food Chemical Codex<sup>1, 2</sup>
- US Standard of Identity 21CFR 168.122<sup>1, 2</sup>
- US ADPI Product Standard
- Chinese Standard GB 25595-2018
- Indian Food Safety and Standards Regulations: 2.1.20 Standards for Edible Lactose<sup>1</sup>
- German Ordinance on Milk Products

<sup>1</sup> The mentioned standards are describing the properties of unrefined lactose. The lower pH value of the MEGGLE Products is solely due to the refining process leading to a higher purified product.

<sup>2</sup> Therefore "Affirmed as GRAS".

**Starch** is the natural occurring polysaccharide in maize / corn. It is gained via physical processes. It is a processed product of the milling industry. Starch is not regarded as food additive. Therefore, JECFA and other food additive standards does not exist.

Corn starch is listed in the United States FDA SCOGS (GRAS) database with the Type of Conclusion:

*"There is no evidence in the available information on [substance] that demonstrates, or suggests reasonable grounds to suspect, a hazard to the public when they are used at levels that are now current or might reasonably be expected in the future."*

Furthermore, the above mentioned MEGGLE Product is in compliance with horizontal regulation e.g. regarding residues and contaminants in Codex, EU, German, US legislation.

*This MEGGLE Information was electronically released and is valid without signature.*
